

Discinsanity Tags

A weekly bag-tag league app for the Lehigh Valley

Project overview · updated June 29, 2026

What it is

Discinsanity Tags is a phone web-app that runs the league's weekly **bag-tag** game: players compete for the lowest-numbered tag and swap tags based on how they finish. UDisc keeps score, but it **won't reshuffle the tags**. This app does it instantly across every division, tracks the rotating schedule, keeps the full history, links back to UDisc + PDGA, and celebrates when someone climbs.

Everything included

Per-division reshuffle

Present-only swap, golf scoring, hold-position ties. Every UDisc division (MPO, MA1, MA2, MA3, ...) gets its own tag set and reshuffles independently.

↑ Hands-off UDisc import

Auto-detects name / score / division / PDGA columns. Anyone not on the roster is **auto-added** as a new player — zero clicks for the coordinator.

Big celebrations

Claiming the #1 tag triggers a full-screen gold moment (crown + confetti). Beating your best-ever tag gets a callout.

Weekly schedule

The Sunday rotation across the Valley, this week highlighted, each week linking to its own UDisc event.

↗ Jump to UDisc

Open the day's UDisc event in the UDisc app and bounce back. Keep score in UDisc, tags here.

Profiles + PDGA

Tag-progression graph (lower = better), round-by-round history, a #1 streak, and a link to each player's **PDGA** page.

📁 League history

Every Tags night saved with date, course, and the full scorecard grouped by division. Trades logged too.

↔ Tag trading

Swap two players' tags or reassign one — within a division, keeping tags unique.

Standings + export

Live standings per division with a crown on each #1. Copy text, download CSV, or a shareable page.

Access & roles

Date-password lock to view; an organizer code unlocks editing. Viewers can't change scores.

Real branding

Logo and colors pulled from discinsanity.com — blue, gold, the Assistant typeface — with animations.

Backend-ready

Runs offline in the browser; paste Supabase keys to sync across phones. One file, hosted free on GitHub Pages.

How the workflow goes

1

Unlock — open the link, pick today's date.

2

View — standings, schedule, and player profiles (graph, history, PDGA) — read-only.

3

Go organizer — tap the key, enter the code.

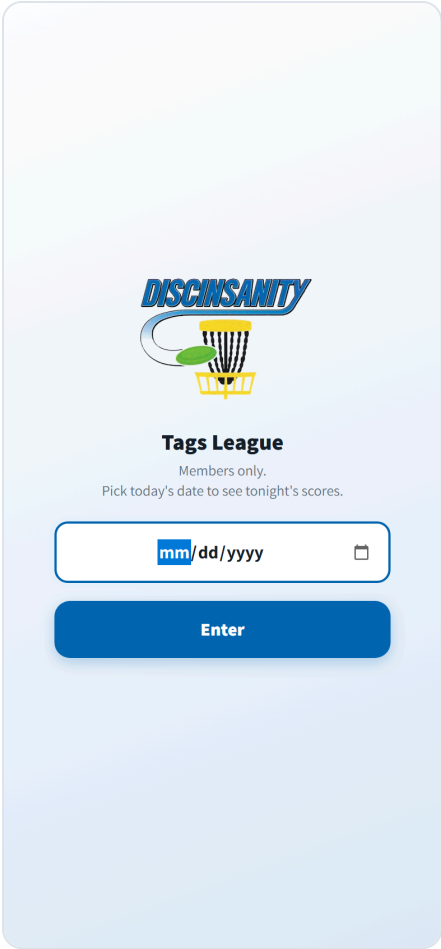

4

Import scores — drop in the UDisc CSV; the roster auto-fills and new players are added automatically.

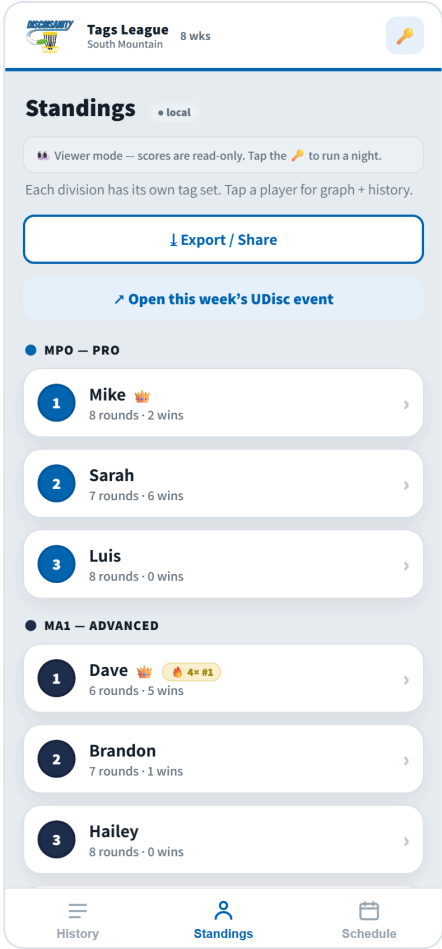

5 **Reshuffle** — tags recompute per division; best score takes the lowest tag.

6 **Save** — new tags lock in, the week is filed, milestones celebrate.

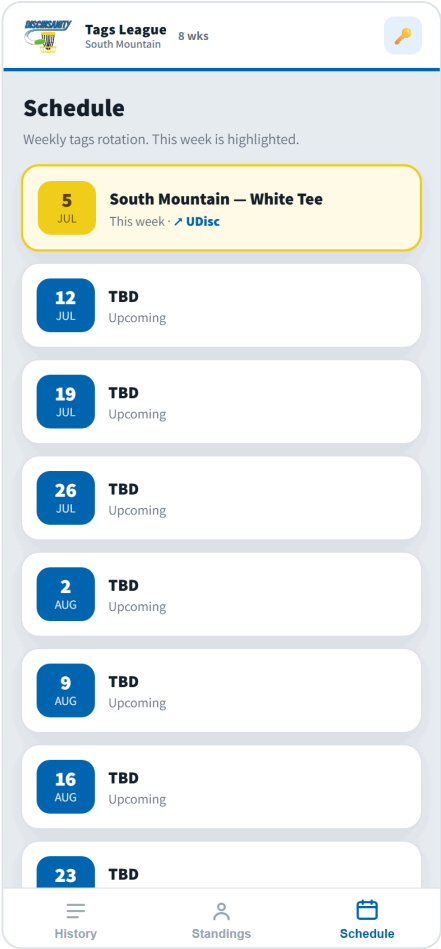

7 **Share** — export the standings, or jump to that day's UDisc event.

Members-only date lock

Import UDisc CSV

Auto-detects name, score & division columns, skips "Par", picks latest round. (Sample CSVs in /samples.)

Pick a course, toggle who's here, type scores — each division swaps its own tags.

Notes

Honest caveats: the date/organizer lock is a *client-side* gate (fine for a private league; real access needs the cloud backend). Week-one tags are seeded by finishing order; from week two the come-in / leave-with swap takes over. The Valley course rotation is filled in-app.
