

Discinsanity Tags

A weekly bag-tag league app for the Lehigh Valley

Project overview · updated June 27, 2026

What it is

Discinsanity Tags is a phone web-app that runs the league's weekly **bag-tag** game: players compete for the lowest-numbered tag and swap tags based on how they finish. UDisc keeps score, but it **won't reshuffle the tags** — the organizer was doing that math by hand every week. This app does it instantly, tracks the rotating schedule, keeps the full history, links back to UDisc + PDGA, and celebrates when someone climbs — built to be as hands-off for the coordinator as possible.

The problem it solves

After every round the tags get re-handed-out: best finisher takes the lowest tag in play, and so on — **separately for each division**, with absent players keeping their tag, as the league rotates courses across the Valley each Sunday. By hand that is slow and error-prone. The app turns it into: import the scores → tap once → done.

Everything included

Per-division reshuffle

Present-only swap, golf scoring (low wins), hold-position ties. Mixed Pro and Mixed Amateur each have their own tag set and reshuffle independently.

↑ Hands-off UDisc import

Auto-detects name / score / division / PDGA columns, skips "Par", picks the latest round. Anyone not already on the roster is **auto-added** as a new player — zero clicks for the coordinator.

Big celebrations

Claiming the #1 tag triggers a full-screen gold moment (crown + confetti). Beating your best-ever tag gets a callout. The #1 is what everyone chases.

Weekly schedule

The Sunday rotation across the Valley, this week highlighted. Organizers set the course + tee per week; players see where tags is each week.

↗ Jump to UDisc

Open the day's UDisc event in the UDisc app and bounce back — each scheduled week links to its own event. Keep score in UDisc, tags here.

Player profiles + PDGA

Tag-progression graph (lower = better), the tags they moved through, round-by-round history, a #1 streak, and a link to their **PDGA** page.

📁 League history

Every Tags night saved with date, course, and the full scorecard grouped by division. Trades are logged too.

↔ Tag trading

Swap two players' tags or reassign one — within a division, keeping tags unique. Logged to history.

Standings + export

Live standings per division with a crown on each #1. Copy text for the group chat, download CSV, or a shareable standings page.

Access & roles

Date-password lock to view; an organizer code unlocks editing. Viewers can't change scores; saved rounds are immutable.

Real branding

Logo and colors pulled from discinsanity.com — blue, gold, the Assistant typeface — with animations to make it feel alive.

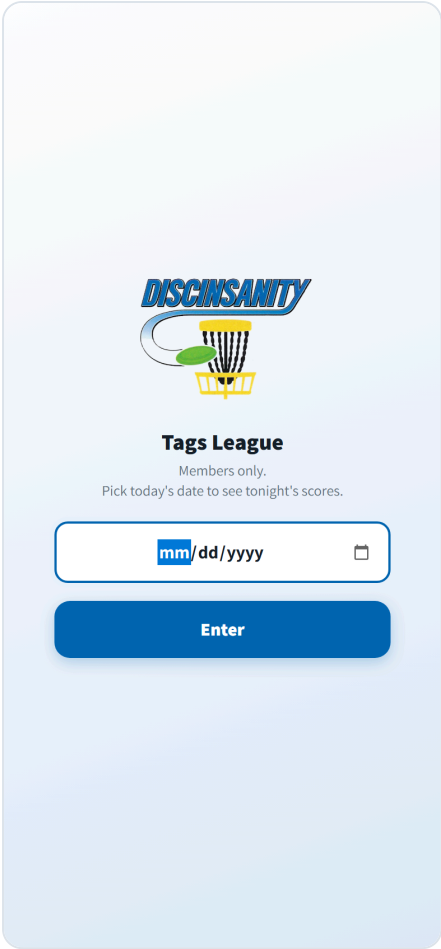

Backend-ready

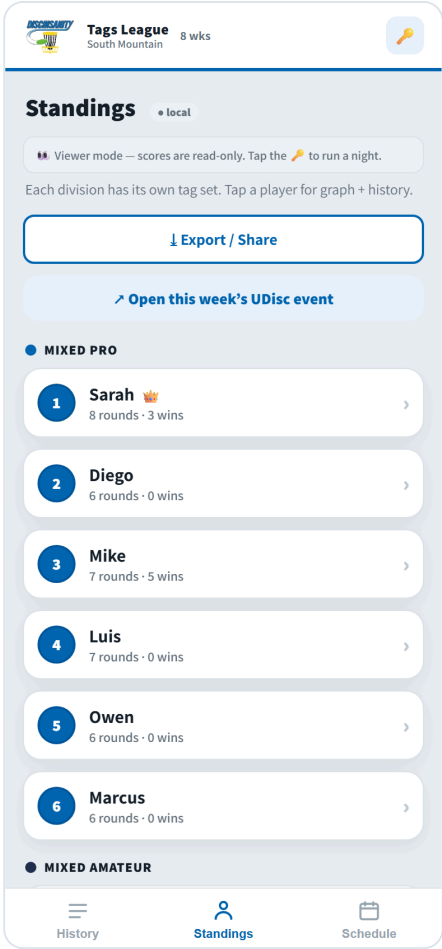

Runs offline in the browser (localStorage); paste Supabase keys to sync across phones. One self-contained file, hosted free on GitHub Pages.

How the workflow goes

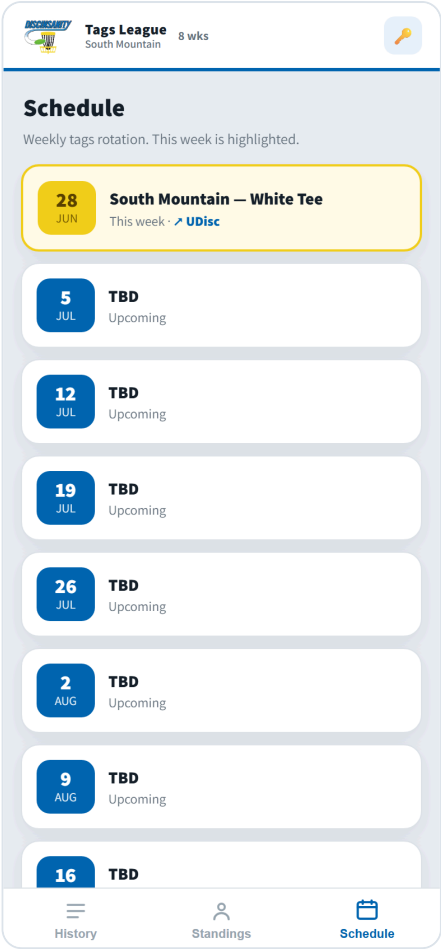

- 1** **Unlock** — open the link, pick today's date. Only people there that day get in.
- 2** **View** — standings, the weekly schedule, and player profiles (graph, history, PDGA) — read-only for everyone.
- 3** **Go organizer** — tap the key, enter the code, to run the night.
- 4** **Import scores** — drop in the UDisc CSV; the roster auto-fills and any new player is added automatically.
- 5** **Reshuffle** — tags recompute per division; best score takes the lowest tag in play.
- 6** **Save** — new tags lock in, the week is filed, milestones celebrate (#1, personal best).
- 7** **Share** — export the standings, or jump to that day's UDisc event.

Notes

Honest caveats: the date/organizer lock is a *client-side* gate — fine for a private league, but real access control would need the cloud backend. The CSV parser is best-guess until a real Sunday export locks the exact column names (incl. whether UDisc includes a PDGA column). The Valley course rotation is filled in-app (UDisc doesn't expose it to scrape). All quick follow-ups.
